

Company : Talking Medicines Limited

Job Description: Software Engineer – an innovator with an interest in Data Science

Location: Glasgow City-Centre

Salary: Dependent upon experience

About Talking Medicines

We are a data tech Company working in Healthcare at an exciting stage in our journey. We were formed 5 years ago & are currently accelerating through a high growth phase. We are a small team with a great opportunity for personal and company growth in both the UK & Internationally. We believe that Talking Medicines can help drive more effective medicines. We do this in two ways: through supporting people when they take their medicines with a free App called Medsmart® and secondly through using this engagement to collect patterns of data (data for good) about how medicines are taken so that marketing teams in Pharmaceutical companies can see how their medicines are consumed in the real world. This matters because what happens in the real world impacts the outcome for a medicine.

We gather this data via Medsmart® where we have linked the barcode on the packaging of 25K prescription & over the counter medicines to trusted and interactive information about the medicine and how to take it, using regulator MHRA as a source. Medsmart® is available as a free App to consumers who scan the barcode to help them manage their medicines and remember to take them as prescribed. Our App downloads are above 55K. Our ambition is to create a global gold standard in digital real-world data, with UK roll out followed by Europe, US.

A fantastic opportunity to work with a fast growing, creative company working on Talking Medicines flagship Medsmart® product. Seeking a Software Developer who is an innovator and has a keen interest in data science, enjoys challenges and working at a fast pace amongst a dynamic team. The ability to work across the Medsmart® product suite - the App, Website, Knowledge Base, Administration Tool and Internal & Customer Data Portals. The successful candidate will gain experience of working in an agile development team, learning to take an analytic approach to solve complex technical challenges.

What you can expect as a Software Engineer

- A supportive, trusting and transparent working environment
- A fast pace of work with real measured achievements
- An opportunity to lead & shine in creating growth opportunities for our Medsmart® App Data Service

We are looking for some experience across

- Software skills with restful web services development
- Any experience of mobile development (iOS and Android Apps, APIs – languages such as Xamarin, Kotlin, Swift)
- SQL skills and understanding of database models
- Knowledge of cloud computing services
- An understanding of Agile principles
- Experience in automated testing, continuous integration and deployment
- Experience of business analytics packages (Power BI, Mix Panel, AppsFlyer)
- Social media coding & tracking
- Any knowledge of digital health would be beneficial

About you

- Enjoy working in a lean & agile team
- Confident & self-driven
- Organised
- Analytical
- Curious to find answers

Why Us?

70% of people take a prescription medicine at any time, and yet 50% don't take their medicines as they are prescribed because they are confused or forget, that's huge medicine wastage and impact. You can part of a digital solution that provides support for people & their health. You will have the opportunity for personal growth & success in taking Medsmart® to a new level. We offer you a supportive office environment & the opportunity for your work to really make a difference.
